

1. Install XAMPP(Windows users) or MAMP(Mac users).
2. By using a web browser (Firefox or Chrome, etc.) go to "localhost/phpMyAdmin".
3. Make a new database like "Movie_shop", in phpMyAdmin.

4. Make a new account (with a simple username and password) for Movie_shop.
5. In Movie_shop database, make the same tables as TP1 and use the same data for the tables.
6. In your computer's hard drive, find **hotdocs** folder. Inside this folder, make a .html file which is called: TP5_yourname.html (this webpage has an empty field and a button, which has explained in TP5.pdf).
7. To create a HTML or PHP files you can simply use notepad or other text application. However, you need to save it with .html or .php extensions.
8. Also, make a PHP file which is called: TP5_yourname.php. Your html file should call this PHP webpage in it (the way we connect it to our database (phpMyAdmin: Movie_shop) to run the queries 1..5).
9. Finally, you have two weeks, to submit these **two files (TP5_yourname.html and TP5_yourname.php)** on the Moodle platform (the scheduled deadline: 08/04/2019, 08:30 am).
